

Postfix Mail Server pada Ubuntu

dig mx namadomain.com

#Install PostFix

```
apt-get install postfix
apt-get install mailutils (ini terkadang telah ikut terinstall)
sudo apt-get install courier-pop
sudo apt-get install courier-imap
```

#Membuat user

```
sudo useradd -m -s /bin/bash fmaster
sudo passwd fmaster
sudo postconf -e "home_mailbox = Maildir/"
sudo postconf -e "mailbox_command = "
sudo postconf -e "mydestination = mail.dedihermanto.com,
    localhost.localdomain, localhost, dedihermanto.com"
sudo postconf -e "mynetworks = 127.0.0.0/8, 192.168.1.0/24"
sudo postconf -e "inet_protocols = all"
```

#netcat mail.dedihermanto.com 110

```
ehlo localhost
mail from: root@localhost
rcpt to: fmaster@localhost
data
Subject: My first mail on Postfix
```

```
Hi,
Selamat Datang Ya?
regards,
Admin
. (Ketik titik kemudian Enter)
quit
```

#Cek email

```
su - fmaster
mail
```

#Install Squirrel Mail

```
Apt-get install squirrelmail
```

#Edit file /etc/apache2/apache2.conf

```
nano /etc/apache2/apache2.conf
tambahkan : Include /etc/squirrelmail/apache.conf
```

#nano /etc/apache2/sites-enabled/000-default

```
<VirtualHost *:80>
    ServerName mail.dedihermanto.com
    ServerAlias webmail.dedihermanto.com
    DocumentRoot /usr/share/squirrelmail/
</VirtualHost>
```
